KFC Yum! Center Lutron Lighting System Labor RFP
FAQ's with Lutron Electronics

Will we be able to reuse the existing cable? If not approximately how much cable will need to be replaced?

Most of existing cable can be reused.

Approximately how long will Startup and Commissioning take and how many laborers would we need to assist?

Startup will take a couple days and would only need one person in case of an issue. We will perform a pre-construction walk and a pr-wire to help with getting everyone moving.

Will Lutron be providing all of the programming including the devices or are we to program the devices with Lutron assistance?

Yes, Lutron will program everything with this particular system.

Are all of the devices located in accessible areas? Are there any devices or parts that need to be replaced that we would need a lift for etc?

Part of our final pre-construction walk is to make sure we don't miss anything. No, most locations can be reached with a ladder. We do have a lift on site if needed.

Do you have an approximate duration or typical duration for this type of upgrade?

The labor for this shouldn't take more than a week or two. It is mostly unplugging keypads and plugging in the new ones, remove processor panel and replace with smaller one and re terminate the links. The new graphic eyes are line voltage, but it is unplugging the old and re terminating the new. There is a tag on the BOM that shows what it is replacing for some of the devices.

Do you anticipate us needing any OT to perform any of the work or to meet the 10/31 deadline?

You should account for some contingency as it will be tight, but we aim to get the gear shipped in time to get it done.

Do you have cut sheets on the new devices?

All the model numbers in the BOM can be searched on google, or our website for the cuts
